SUMMARY

Hi, I'm Steve, an aspiring software developer that's passionate about solving problems. I've recently completed a full stack Bootcamp with Coder Academy, and I'm excited about landing my first role as a software developer to kickstart my career.

- Excellent communication and interpersonal skills, with the ability to negotiate and communicate complex information.
- Driven and motivated, setting high standards for myself and those around me.
- Strong history of liaising with customers and clients, with the ability to work together towards a shared outcome.

WORK EXPERIENCE

Electrical Security Technician

ECS Services / 2019 - 2022

Working on large scale, commercial electrical security systems. Involving installation, modification and programming.

Apprentice Electrician

360 Solar / 2017 - 2019

Working mainly on domestic and commercial solar installations and general domestic electrical work while attending trade school.

iOS Service Technician

MyMac Apple / 2015 - 2016

Repairing and trouble shooting Apple iPhone's and Laptops. Involving technical support, general customer service and repair services.

Project Lead - Digital Media

LOKE Branded Apps / 2014 - 2015

Managing and coordinating a team of marketing and design specialists to deliver projects for major clients.

Digital Marketing Coordinator

LOKE Branded Apps / 2013 - 2014

Content creation, strategy and coordination for a large array of clients covering all facets of digital media.

PROJECTS

Portfolio Website

Fully Responsive Website

A fully responsive personal portfolio website, made with only HTML and CSS. This was a great challenge to create a beautiful website that could be viewed on multiple devices and screen sizes.

- HTML and CSS
- Mail Trap
- Mobile First Design Principals
- Site Maps and Wire Frames

Terminal Game Application

Escape Room/ Puzzler Written With Python3

This was a fun project undertaken in the first semester of my Diploma, utilising the Python and Bash skills I had learned up to that point.

- Bash Scripting
- Unit testing
- Modular functions
- Object Oriented Programming concepts
- Trello board to stay organised and on track.

Book Store Inventory

RESTful API Backend Built With Flask

The backend of a book store's inventory system, this was the largest project I had undertaken so far. Using Flask, SQLAlchemy and Marshmallow extensively throughout this project helped to solidify concepts such as schemas, models and RESTful APIs .

- Python3
- Flask
- SQLAlchemy
- Marshmallow
- Trello
- Postman

Advent of Code 2022

Just For Fun

I started doing the Advent of Code 2022 challenges with a group of friends who all work in the industry in different facets, competing against each other for the cleanest and most inventive code. I have fallen a little behind in order to stay ahead of my studies, but plan to tackle the rest when I have a spare moment.
